-i- FUNCTION: VOLTAGE-GATED CHLORIDE CHANNEL. CHLORIDE CHANNELS:
SEVERAL FUNCTIONS INCLUDING THE REGULATION OF CELL VOLUME;
MEMBRANE POTENTIAL STRABILIZATION, SIGNAL TRANSDUCTION AND
TRANSEPTHELLAL TRANSPORT.

-i- SUBCELLULAR LOCATION: Integral membrane protein.

-i- TISSUE SPECIFICITY: PREDOMINANTLY EXPRESSED IN SKELETAL MUSC
-i- SIMILARITY: BELONGS TO THE CHLORIDE CHANNEL FAMILY.

-i- SIMILARITY: CONTAINS 2 CBS DOMAINS.

FUNCTION: Chromatin-remodelling protein that function in cell fate determination.

SUBCELLULAR LOCATION: Nuclear (Potential).

SIMILARITY: BELONGS TO THE SNF2/RAD54 HELICASE FAMILY.

SIMILARITY: CONTAINS 2 PHO-TYPE ZINC FINGERS.

SIMILARITY: CONTAINS 2 CHROMO DOMAINS.

IN THE ABSENCE OF TONB THESE RECEPTORS BIND THEIR SUBSTRATES BUT DO NOT CARRY OUT ACTIVE TRANSPORT. TONB ALSO INTERACTS WITH SOME COLICINS AND JS INVOLVED IN THE ENERGY—DEPENDENT, IRREVERSIBLE STEPS OF BACTERIOPHAGES PHI-80 AND TI INFECTION. IT COULD ACT TO TRANSDUCE ENERGY FROM THE CYTOPLASMIC MEMBRANE TO SPECIFIC ENERGY-REQUIRING PROCESSES IN THE OUTER MEMBRANE, RESULTING IN THE RELEASE INTO THE PERIPLASM OF LIGANDS BOUND BY THESE OUTER MEMBRANE PROTEINS.

-I- SUBUNIT: HOMODIMER. FORMS A COMPLEX WITH THE ACCESSORY PROTEINS EXHB AND EXED (By SIMILIARILY).

-I- SUBCELLULAR LOCATION: PERIPLASMIC. ANCHORED TO THE CYTOPLASMIC MEMBRANE VIA ITS N-TERMINAL SIGNAL-LIKE SEQUENCE, SPANS THE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      STRAIN-LT2 / SGSC1412 / ATCC 700720;

ANTIREPRESSOR.

ANTIREPRESSOR.

INSUE SPECIFICITY: UBIQUITOUS. HIGH LEVELS OF EXPRESSION AFTISCUE SPECIFICITY: UBIQUITOUS. HIGH LEVELS OF EXPRESSION AFTISCHED IN LUNG, SPLEEN AND BRAIN.

INDUCTION: REGULATED DURING CELL CYCLE PROGRESSION.

DOMAIN: THE N-TERMINAL REGION CONTAINS REPRESSION FUNCTIONS ARE DIVIDED INTO THREE INDEPENDANT REPRESSION DOMAINS (RD1, AND RD3). THE C-TERMINAL REGION CONTAINS THE NUCLEAR RECEPTURE AND RD3). THE C-TERMINAL REGION CONTAINS THE NUCLEAR RECEPTURE AND RD3.

INTERACTING DOMAINS THAT ARE DIVIDED IN TWO SEPARATE INTERACTING DOMAINS THAT ARE DIVIDED IN TWO SEPARATE INTERACTIONS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          FUNCTION: MEDIATES THE TRANSCRIPTIONAL REPRESSION ACTIVITY OF SOME NUCLEAR RECEPTORS BY PROMOTING CHROMATIN CONDENSATION, THUS PREVENTING ACCESS OF THE BASAL TRANSCRIPTION.

SUBUNIT: FORMS A LARGE COREPRESSOR COMPLEX THAT CONTAINS SINJA/B AND HISTONE DEACETYLASES HARC1 AND HARC2. THIS COMPLEX ASSOCIATES WITH THE THYROID (TR) AND THE RETINOID ACID RECEPTORS (REAR) IN THE ABSENCE OF LIGAND, AND MAY STABILIZE THEIR INTERACTION WITH TRIB. SUBCELLULAR LOCATION: Nuclear.

ALTERNATIVE PRODUCTS: 2 ISOFORMS; SMRT/TRAC-2 (SHOWN HERE) AND TRAC-1; ARE PRODUCED BY ALTERNATIVE SPLICING. TRAC-1 CONTAINS ONLY THE C-TERMINAL RECEPTOR-INTERACTING DOMAIN AND ACTS AS AN ANTITERBRACTOR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SPECIFICITY: CONTAINS 1 SANT-A DOMAIN.
SIMILARITY: CONTAINS 1 SANT-A DOMAIN.

CBS2 HUMAN STANDARD; PRT; 1484 AA (9BEXF3; Q9CGC3; Q9GEF5 15-JUN-2002 (Rel. 41, Created) 15-JUN-2002 (Rel. 41, Last sequence update) 15-JUN-2002 (Rel. 41, Last amotation update) 15-JUN-2002 (Rel. 41, Last amotation update)
                                                                                                                                                                         and B/CECR2B; are produced by alternative splicing.

-! TISSUE SPECIFICITY: Highly expressed in skelatal muscle, thymus, placenta and lung. Expressed at lower level in brain, heart, colon, spleen, kidney.

-!- MISCELLANEOUS: Candidate gene for the Cat Eye Syndrome (CES), a developmental disorder associated with the duplication of a 2 Mb region of 22q11.2. Duplication usually takes in the form of a surpernumerary bisatellited isodicentric chromosome, resulting in four copies of the region (represents an inv dup(22)(q11)). CES is characterized clinically by the combination of coloboma of the iris and anal atresia with fistula, downslanting palphral fissures, presuricular tags and/or pits, frequent occurrence of heart and renal malformations, and normal or near-normal mental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 "Sequence analysis of LRPPRC and its SEC1 domain interaction partners suggests roles in cytoskeletal organization, vesicular trafficking, nucleocytosolic shuttling, and chromosome activity.";

THIS PROTEIN BINDS CALMODULIN, ACTIN, AND SYNAPSIN. MARCKS IS A FILAMENTOUS (F) ACTIN CROSS-LINKING PROTEIN.
-!- PTM: PHOSPHORYLATION BY PKC DISPLACES MARCKS FROM THE MEMBRANE. IT ALSO INHIBITS THE P-ACTIN CROSS-LINKING ACTIVITY.
-!- SIMILARITY: BELONGS TO THE MARCKS FAMILY.
                                                                                                                                                                                                                                                                                                   SEQUENCE FROM N.A., AND PARTIAL SEQUENCE.

structural polyprotein - eastern equine encephalomyelitis virus
N,Contains: 6K protein; capsid protein; E1 protein; E2 potein; E3 protein
C,Species: eastern equine encephalomyelitis virus
C,Species: eastern equine encephalomyelitis virus
C,Pacession: S72350
C,Accession: S72350
R,Weaver, S.C.; Hagenbaugh, A.; Bellew, L.A.; Netesov, S.V.; Volchkov, V.E.; Chang, G.W.
R,Weaver, S.C.; Hagenbaugh, A.; Bellew, L.A.; Netesov, S.V.; Volchkov, V.E.; Chang, G.W.
Virology 197, 375-390, 1993
A,Title: A comparison of the nucleotide sequences of eastern and western equine encephal
A,Reference number: S72349; MUID:94025587; PMID:8105605

Apaccession: S72350
